Assignment 3 - Assignment on Access command line with desktop

You must have to know about Access command line.

The objective of this assignment is to familiarize students with accessing the command line interface (CLI) within a desktop environment. Students will learn how to open a terminal emulator, execute basic commands, navigate the file system, and perform common tasks using the command line.

Questions for this assignment

1. Introduce essential command-line navigation commands such as cd, ls, pwd, and mkdir.
2. Demonstrate basic file manipulation commands including cp, mv, rm, and touch.
3. Explain how to copy, move, delete files, and create new empty files using the command line?
4. Introduce commands such as chmod and chown to modify file permissions and ownership.
5. Briefly explain the concept of a desktop environment.
6. Discuss the significance of integrating the command line interface with the desktop environment.

Solution by the Instructor:

1. Introduce essential command-line navigation commands such as cd, ls, pwd, and mkdir.
    - To change directory: cd directory_name
    - To list directory contents: ls
    - To display current working directory: pwd
    - To create a new directory: mkdir new_directory

2. Demonstrate basic file manipulation commands including cp, mv, rm, and touch. Explain how to copy, move, delete files, and create new empty files using the command line?
    - To copy a file: cp source_file destination_file
    - To move a file: mv source_file destination_file
    - To remove a file: rm file_name
    - To create a new file: touch new_file

3. Introduce commands such as chmod and chown to modify file permissions and ownership.
    - To change file permissions: chmod permissions file_name
    - To change file ownership: chown new_owner:group file_name

4. Briefly explain the concept of a desktop environment.
   Discuss the significance of integrating the command line interface with the desktop environment.
    - A desktop environment provides a graphical user interface (GUI) for interacting with the operating system.
    - Integrating the command line interface with the desktop environment allows users to access powerful system management tools from within the familiar desktop environment.
