**Assignment 9 -** Practice managing local users and groups in a Linux environment

**Objective:** Practice managing local users and groups in a Linux environment.

This assignment assumes you are working in a Red Hat Enterprise Linux (RHEL) environment.

**Questions for this assignment**

Task 1: Create a New User with password

Task 2: Modify User Properties

Task 3: Create a New Group

Task 4: Add User to a Group

Task 5: View User and Group Information

Task 6: Remove User and Group

**Solutions by the Instructor:**

Task 1: Create a New User with password

1. Create a new user named john_doe with the user ID 1001.

   sudo useradd -u 1001 john_doe

2. Set a password for the new user.

   sudo passwd john_doe

Task 2: Modify User Properties

3. Change the default shell for the user john_doe to bash.

   sudo usermod -s /bin/bash john_doe

4. Set an expiry date for the user john_doe so that the account is automatically disabled on a specific date.

sudo usermod -e 2023-12-31 john_doe

Task 3: Create a New Group

5. Create a new group named developers.

   sudo groupadd developers

Task 4: Add User to a Group

6. Add the user john_doe to the developers group.

   sudo usermod -aG developers john_doe

Task 5: View User and Group Information

7. Display information about the user john_doe.

   id john_doe

8. List all members of the developers group.

   getent group developers

Task 6: Remove User and Group

9. Remove the user john_doe from the system.

   sudo userdel john_doe

10. Remove the developers group from the system.

    sudo groupdel developers
