Assignment 15 - Assignment on Analyzing & storing logs

The objective of this assignment is to familiarize students with analyzing and storing logs on Red Hat Enterprise Linux (RHEL) 9.

You must be familiar with storing logs.

Questions for this assignment

1. Discuss the significance of log analysis in system administration.
2. How to navigate to the **/var/log** directory using the command line?
3. Explain the purpose of log rotation and its benefits for managing log files.
4. Discuss the importance of securing log files to protect sensitive information.

Solution by the Instructor:

1. Discuss the significance of log analysis in system administration.
   Log analysis is crucial for identifying system issues, troubleshooting problems, and monitoring system activity.

2. How to navigate to the **/var/log** directory using the command line?
   To navigate to the **/var/log** directory, use the command: **cd /var/log**.

3. Explain the purpose of log rotation and its benefits for managing log files.
   Log rotation is important for managing log files and preventing them from becoming too large or consuming excessive disk space.

4. Discuss the importance of securing log files to protect sensitive information.
   Secure log storage involves setting appropriate permissions and ownership for log files to restrict access.
