**Assignment 16 -** Assignment on Archiving and file transfer

The objective of this assignment is to familiarize students with archiving and file transfer techniques on Red Hat Enterprise Linux (RHEL) 9.

Must be familiar with Archiving and file transfer.

**Questions for this assignment**

1. Discuss common archive formats such as tar, zip, and gzip.
2. Explain how to extract files from a tar archive.
3. Provide an overview of archiving and its importance in organizing and compressing files.
4. Discuss SSH method for transferring files between systems.

**Solution by the Instructor:**

1. Discuss common archive formats such as tar, zip, and gzip.
   Common archive formats include tar (uncompressed), tar.gz (compressed with gzip), and zip

2. Explain how to extract files from a tar archive.
   To extract files from a tar archive: **tar -xvf archive.tar**

3. Provide an overview of archiving and its importance in organizing and compressing files.
   Archiving is the process of combining multiple files or directories into a single file for easier storage or transfer.

4. Discuss SSH method for transferring files between systems.
   SSH (Secure Shell) provides secure remote access and file transfer capabilities.
