Assignment 17 - Assignment on Managing remote server

The objective of this assignment is to familiarize students with managing remote servers in Red Hat Enterprise Linux (RHEL) 9.

If you encounter any difficulties during the assignment, refer to the provided resources.

Questions for this assignment

1. How to use the **ssh** command to establish SSH connections?
2. How to use the **ssh** command with the **-t** option to run interactive commands remotely?
3. What is importance of remote server management in system administration?

Solution by the Instructor:

1. How to use the ssh command to establish SSH connections?
   To connect to a remote server using SSH: ssh username@remote_host
2. How to use the ssh command with the -t option to run interactive commands remotely?
   To run an interactive shell session remotely: ssh -t username@remote_host
3. What is importance of remote server management in system administration?
   It allows administrators to perform various tasks such as configuration, maintenance, and troubleshooting without physically accessing the server.
